

Information Systems

HW1: Jupyter NB and Python Review

Name: First Last ¶

1) Concatenation and Loops

- Make a variable year that stores the string "Class of "
- Use a for loop and string concatenation that prints out the 4 class years currently enrolled at CGA.
Class of 2018
Class of 2019
Class of 2020
Class of 2021

```
In [ ]: '''YOUR CODE HERE'''
```

2) Cleaning up strings

There are two lists defined below (words and dates), each needs to be "cleaned up":

- remove \n or \t from the strings in words, then print out the "cleaned" string:
hello
world
info
systems
- print out just the day from the date string in dates (hint: use the split function):
19
2
17
28

```
In [ ]: # Remove the \n and \t
words = ["hello\n", 'world\n', 'info\t', 'systems\t']
'''YOUR CODE HERE'''
```

```
In [ ]: # Extract the day
dates = ["1/19/2019", '4/2/1974', '10/17/2000', '2/28/2016']
'''YOUR CODE HERE'''
```

3) Below `exList` is defined for you. Complete the following tasks:

- Print out the first 5 letters: w, e, l, c, o
- Print out the last 5 letters: e, b, a, c, k
- Print out the 3rd to the 7th letters: l, c, o, m, e

```
In [ ]: # Define exList and display  
exList = list('welcomeback')  
exList
```

```
In [ ]: '''YOUR CODE HERE'''
```
