

I compiled a partial list of functions, which I share with you in Table 9-2. I omitted some of the most specialized and obscure functions.

For complete details on a particular function, type the function name in a VBA module, move the cursor anywhere in the text, and press F1.

Table 9-2 VBA's Most Useful Built-In Functions

Function	*What It Does*
Abs	Returns a number's absolute value
Array	Returns a variant containing an array
Choose	Returns a value from a list of items
Chr	Converts an ANSI value to a string
CurDir	Returns the current path
Date	Returns the current system date
DateAdd	Returns a date to which a specified time interval has been added — for example, one month from a particular date
DateDiff	Returns an integer showing the number of specified time intervals between two dates — for example, the number of months between now and your birthday
DatePart	Returns an integer containing the specified part of a given date — for example, a date's day of the year
DateSerial	Converts a date to a serial number
DateValue	Converts a string to a date
Day	Returns the day of the month from a date value
Dir	Returns the name of a file or directory that matches a pattern
Err	Returns the error number of an error condition
Error	Returns the error message that corresponds to an error number
Exp	Returns the base of the natural logarithm (e) raised to a power
FileLen	Returns the number of bytes in a file
Fix	Returns a number's integer portion
Format	Displays an expression in a particular format
GetSetting	Returns a value from the Windows registry
Hour	Returns the hours portion of a time
InputBox	Displays a box to prompt a user for input
InStr	Returns the position of a string within another string

Function	What It Does
InStrRev	Returns the position of a string within another, from the end of a string
Int	Returns the integer portion of a number
IsArray	Returns True if a variable is an array
IsDate	Returns True if an expression is a date
IsEmpty	Returns True if a variable has not been initialized
IsError	Returns True if an expression is an error value
IsMissing	Returns True if an optional argument was not passed to a procedure
IsNull	Returns True if an expression contains no valid data
IsNumeric	Returns True if an expression can be evaluated as a number
LBound	Returns the smallest subscript for a dimension of an array
LCase	Returns a string converted to lowercase
Left	Returns a specified number of characters from the left of a string
Len	Returns the number of characters in a string
Mid	Returns a specified number of characters from a string
Minute	Returns the minutes portion of a time value
Month	Returns the month from a date value
MsgBox	Displays a message box and (optionally) returns a value
Now	Returns the current system date and time
Replace	Replaces a substring in a string with another substring
RGB	Returns a numeric RGB value representing a color
Right	Returns a specified number of characters from the right of a string
Rnd	Returns a random number between 0 and 1
Second	Returns the seconds portion of a time value
Shell	Runs an executable program
Space	Returns a string with a specified number of spaces
Split	Splits a string into parts, using a delimiting character
Sqr	Returns a number's square root
String	Returns a repeating character or string
Time	Returns the current system time
Timer	Returns the number of seconds since midnight
TimeSerial	Returns the time for a specified hour, minute, and second
TimeValue	Converts a string to a time serial number
Trim	Returns a string without leading or trailing spaces
TypeName	Returns a string that describes a variable's data type
UBound	Returns the largest available subscript for an array's dimension
UCase	Converts a string to uppercase
Val	Returns the numbers contained in a string
Weekday	Returns a number representing a day of the week
Year	Returns the year from a date value
